

Smart Tree

→ Smart Tree Web2.0 File Management

An excellent way of sharing files with clients. Users who already familiar with Windows or Mac file browsers will have no problem using Smart Tree's intuitive web2.0 design. It is a web based Ajax/PHP5.0/MySQL driven directory and file manager. Smart Tree can be accessed from PDA, Palm, Blackberry, or any computer that has internet access.

→ Features

Some features include drag and drop files and folders, dynamic loading file structure, upload progress bar, powerful search engine, thumbnail views including PDF, send emails of single or zipped files directly to clients. Smart Tree can handle multiple users/accounts/permissions allowing administrators to apply its permission's for a certain folder allowing only certain clients the ability to view the folder. Permissions for users can be set to read, read/write, or administrator. There are captured statistics available such as last downloaded files, most downloaded, logins and IP, and much more. You know if a client has downloaded a file and when they logged in last. Smart Tree tracks documents, has secure 256bit encryption, makes it easy to share and manage documents/files. Below is sample screen shot of the software.

Create Folder | Download File | Open All | Close All | Update | Admin Panel | Logout

→ **Website Integration**

We provide logos of different sizes you can place on your website. A guest simply clicks the logo and it directs them to your Smart Tree. For there they simply login and view there respects files and folders.

→ **Future Updates**

As suggestions come along we will integrate them into the software. Some current ideas are providing guests an encrypted link that will automatically log them in. DWG previews and SMS alerts for when a file has been downloaded.
